DETAILED ACTION

1. This action is in response to communications filed on 1/11/2007.
2. Claims 1-24 have been cancelled, claim 25 has been amended and no claims have been added. Thus, claims 25-26 are pending.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shoobridge (US Patent 6633769).

For claim 25, Shoobridge teaches the following limitations:

A method for optimizing power consumption in a communication system (abstract) comprising:

detecting an amount of traffic (lines 33-47 of column 5 mention that if communication is absent for a predetermined time. Thus, amount of traffic, which may be zero or non-zero, is detected), a link (lines 45-55 of column 6 mention that link is maintained by radio device, which is established during step 200. Therefore, the radio device detects the link to maintain the link for communication), battery usage (lines 32-47 of column 5) and a power state of the communication system ("normal mode" and "enhanced mode")

Art Unit: 2116

as mentioned in lines 65-67 of column 2); and
selecting at least one power management state ("sleep mode" and "hot mode"
mentioned in lines 24-40 of column 8) from a plurality of power management states
based at least in part on said detection ("sleep mode" is selected when traffic is zero as
mentioned in lines 40-47 of column 5).

Shoobridge does not explicitly mention about absence of AC power. The hand held
portable device is powered by battery (lines 33-47 of column 5). However, there is no
mention about the absence of AC power in mobile although it is mentioned that the
mobile device can roam from cell to cell (lines 54-65 of column 1).

Examiner takes an official notice that mobile device roaming from cell to cell is typically
driven by battery with an absence of AC power.

It would have been obvious for one ordinary skill in the art at the time the invention was
made to use the mobile without AC power, since powering a portable device by battery
with absence of AC power provides ease of use and simplicity in design.

For claim 26, low power mode is selected when there is no traffic.
